Summary

AI Engineer with 5 years of experience shipping production LLM systems and full-stack SaaS products, with a focus on agentic AI workflows, RAG (Retrieval-Augmented Generation). Hands-on across Python and Node.js/TypeScript backends, React frontends, and AWS cloud infrastructure. Proven ownership of the full AI feature lifecycle: research, prototyping, evaluation, deployment, and monitoring in production environments.

Experience

Freelance Paris, France
AI / Fullstack Engineer (Python, Node.js) Mar 2025 – Present

- Achieved 98% parsing accuracy on 5K+ monthly bills by designing and shipping an LLM-powered document-processing platform (Node.js + PostgreSQL), owning the full architecture from API design through deployment, evaluation metrics, and production monitoring.
- Cut query latency by 40% by building an agentic AI assistant on Amazon Bedrock and AWS Lambda, using an event-driven architecture with clean service boundaries between the LLM orchestration layer and the Node.js API.
- Reached 91% AUC across 14 pathology classes by fine-tuning a ResNet-based CNN for multi-label chest X-ray pathology detection

Codistan Ventures Islamabad, Pakistan
Fullstack Developer Sep 2023 – Dec 2024

- Accelerated credit analysis workflows by 25% by building production Node.js/TypeScript REST APIs and SQL-backed data models for a SaaS fintech platform handling regulated financial data.
- Reduced merge turnaround by 17% by leading 4 developers through structured code reviews, TypeScript standards enforcement, and CI/CD pipeline improvements (GitHub Actions, Docker).
- Delivered frontend features with consistent component architecture, typed interfaces, and regression test coverage.

LearnOBots Islamabad, Pakistan
Software Engineer Oct 2022 – Aug 2023

- Reduced manual reporting workload by 35% by building backend APIs and data reporting services for a SaaS learning platform serving 2,000+ monthly active users.
- Maintained production stability, performance, and security across API and database layers.

National Center of Artificial Intelligence Islamabad, Pakistan
Research Assistant Aug 2021 – Oct 2022

- Designed and maintained data ingestion and processing pipelines supporting applied machine learning research workflows, from data preprocessing to model integration and deployment.
- Managed cloud infrastructure for ML workloads, maintaining 99% uptime.

Projects

Medical Image Analysis Pipeline — Chest X-Ray Pathology Detection

Tech: Python, PyTorch, CNN, Digital Image Processing, FastAPI, React, OpenCV

- Applied Digital Image Processing (DIP) preprocessing pipelines to improve model performance on low-quality clinical scans, handling clinical imaging data with careful attention to data security.

Judiciary Automation — Semantic Legal Search System

Tech: Python, FastAPI, PostgreSQL, FAISS, RAG, OpenAI APIs

- Reduced document retrieval time by 60% across 10K+ legal case files by designing a service-oriented semantic search API using FAISS vector embeddings, validated against a keyword-based baseline.

Askari Chatbot — Agentic RAG Assistant

Tech: RAG, LangChain, FastAPI, React, PostgreSQL, OpenAI APIs, Prompt Engineering

- Built an end-to-end agent-based RAG workflow — retrieval, reranking, prompt engineering, and LLM response generation — on a scalable FastAPI + PostgreSQL backend.

Education

École d'Ingénieurs ECE Paris, France
MSc — Artificial Intelligence & Data Management Graduation: Feb 2026

- Thesis:** Self-Healing Architecture for Multi-Agent RAG Systems — autonomous failure detection and recovery in agentic LLM workflows, domain-scoped agents, production reliability.

National University of Computing and Emerging Sciences Islamabad, Pakistan
BS — Computer Science Graduation: Mar 2021

- Final Year Project:** CNN-based Human Activity Recognition — real-time classification from video inputs.

Skills

- AI & LLM:** Agentic AI Systems, Multi-Agent Workflows, RAG (Retrieval-Augmented Generation), LangChain, LangGraph, Prompt Engineering, LLM Evaluation & Monitoring, Fine-tuning, Embeddings, PyTorch, OpenCV, LLM APIs (OpenAI, Anthropic, Amazon Bedrock).
- Backend:** Node.js, TypeScript, JavaScript, Python, FastAPI, NestJS, Django, REST APIs, GraphQL, OOP & Design Patterns.
- Frontend:** React, Next.js (SSR), shadcn, Tailwind.
- Databases:** PostgreSQL, MongoDB, Redis, FAISS (vector search), SQL schema design.
- Cloud & DevOps:** AWS (Lambda, Bedrock), Docker, GitHub Actions, CI/CD, Microservices, Linux.
